DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-7 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Schoen.

Regarding claim 1, Schoen shows a motor housing assembly (Figures 1-4), comprising:

- A motor housing (2);
- A pair of magnets (18) disposed within the motor housing in a spaced relationship to form at least one space;
- A brush holder (24) having at least one tab (32) that fits within said at least one space in between the pair of magnets.

Regarding claim 2, it is noted that Schoen also shows the pair of magnets forming two spaces and the brush holder having two tabs to fit in the two spaces (Figure 4).

Regarding claim 3, it is noted that Schoen also shows the two spaces being disposed opposite each other and the two tabs on the brush holder are also disposed opposite each other.

Regarding claim 4, it is noted that Schoen also shows the pair of magnets being attached to an inner surface of the motor housing (2).

Regarding claim 5, it is noted that Schoen also shows a motor housing assembly (Figures 1-4), comprising:

- A motor housing (2);
- A pair of magnets (18) attached to an inner surface of the motor housing in a spaced relationship to form two spaces that lie generally opposite each other;
- An armature (41) disposed in between the pair of magnets; and
- A brush holder (24) having a plurality of brushes (47) and two tabs (32) that fit within the two spaces formed by the pair of magnets to align the plurality of brushes with the magnets.

Regarding claim 6, it is noted that Schoen also shows the tabs (32) fitting within the two spaces in a sliding engagement.

Regarding claim 7, it is noted that Schoen also shows the pair of magnets and the tabs surrounding the circumference of the armature after the motor housing and the brush holder are assembled together (Figure 2).
